THE ESO EXISTS TO

- Ensure reliable, secure system operation to deliver electricity when customers need it
- Transform participation in smart and sustainable markets
- Unlock consumer value through competition
- Drive towards a sustainable, whole energy future

The challenge: the energy system is changing

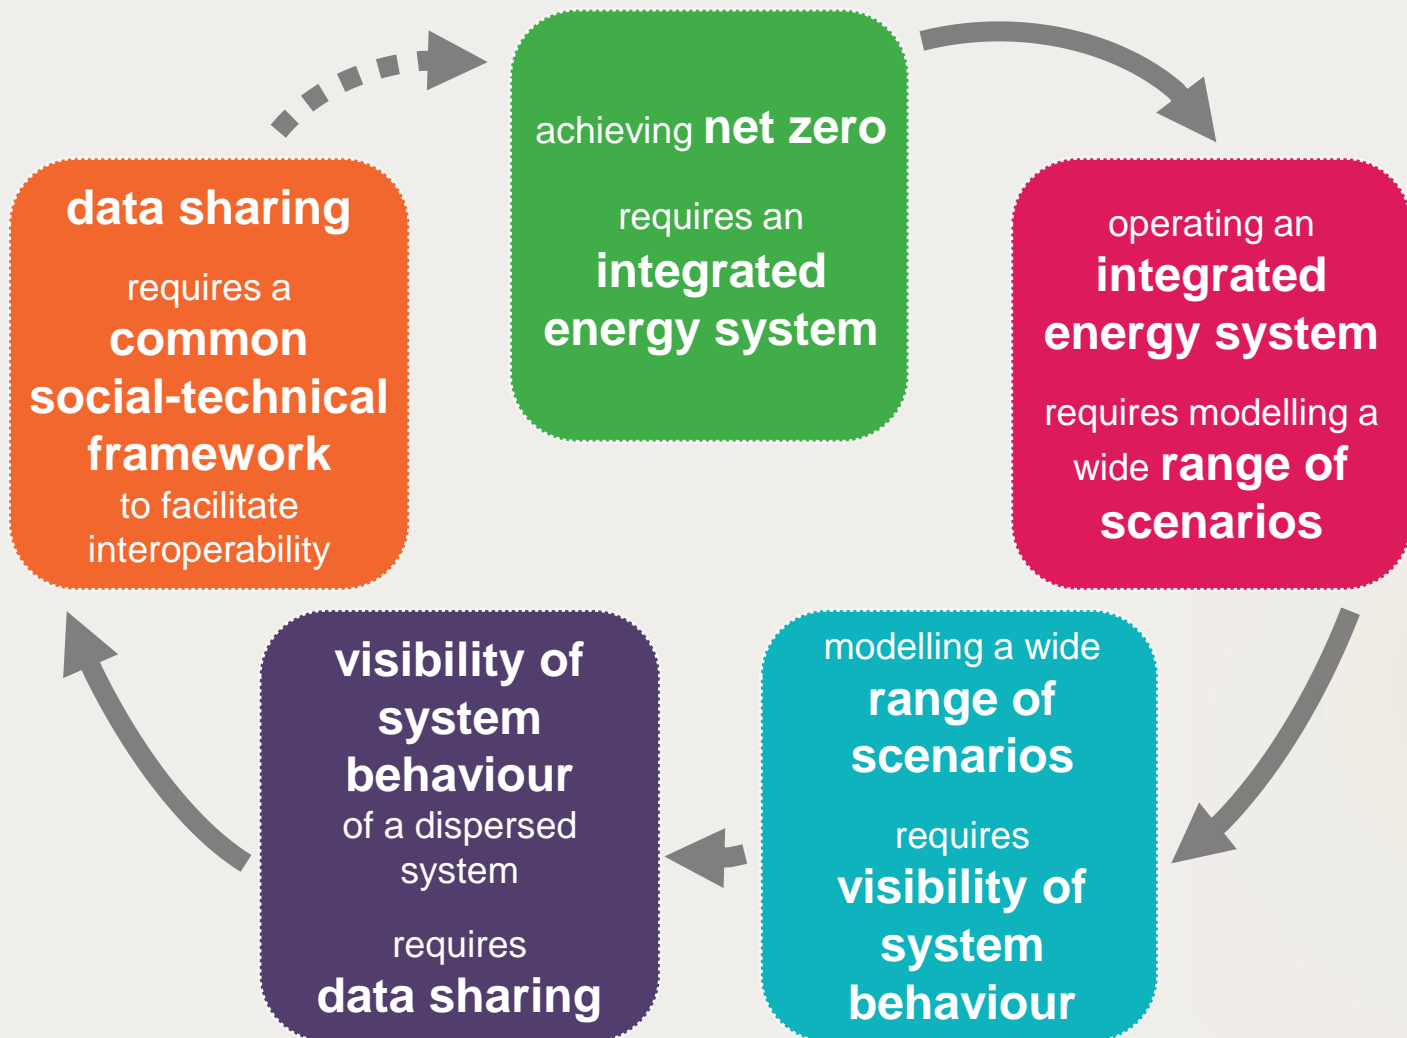

achieving **net zero**
requires an
**integrated
energy system**

operating an
**integrated
energy system**
requires modelling a
wide **range of
scenarios**

modelling a wide
**range of
scenarios**
requires
**visibility of
system
behaviour**

The challenge: the energy system is changing

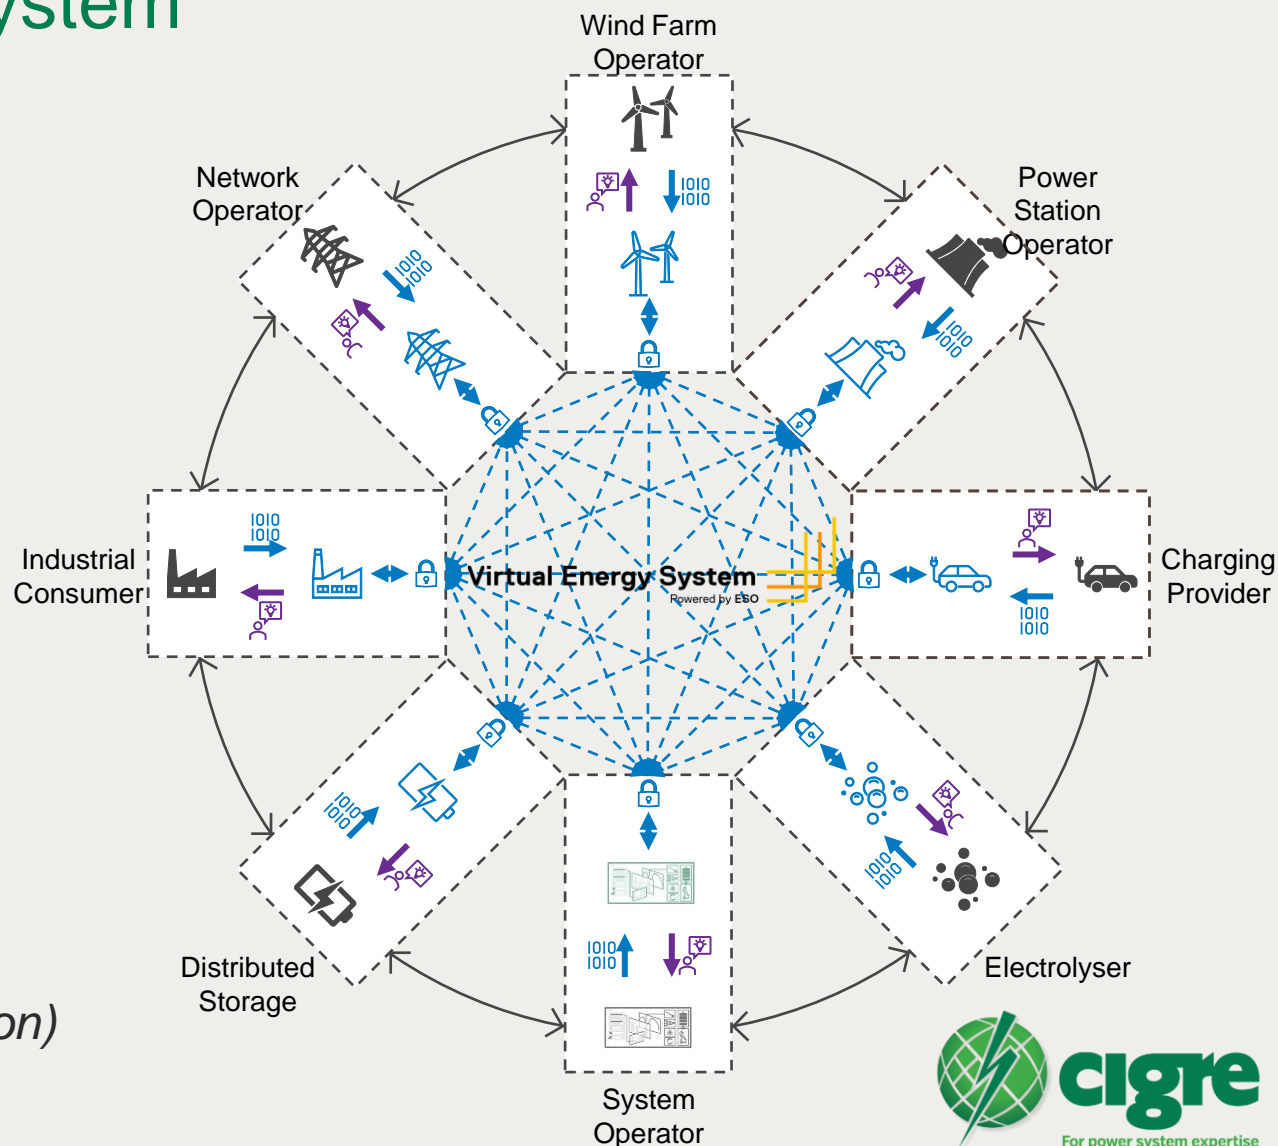

The solution: Virtual Energy System

Ambitious objective:

Enable the development of an ecosystem of **connected digital twins** For the **entire GB energy system** to solve wider system challenges

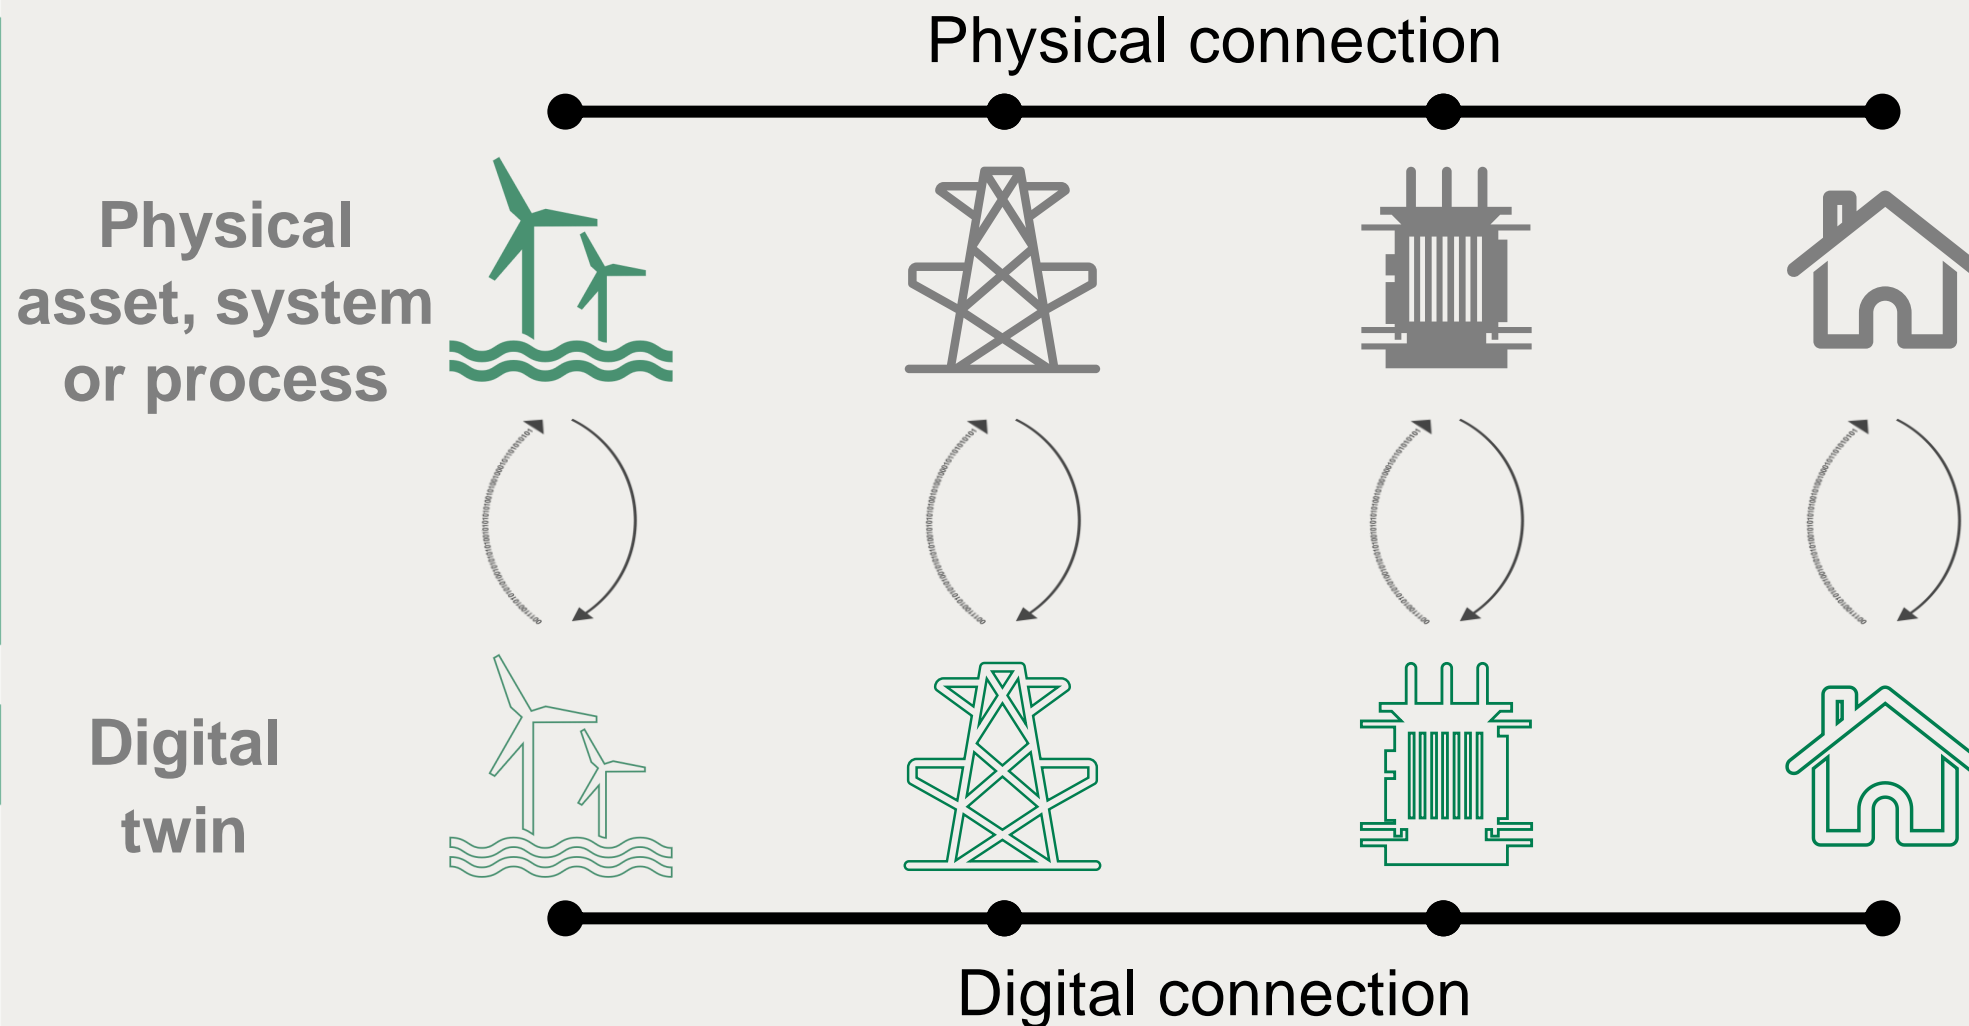

(e.g. energy optimisation, carbon reporting, investment planning, ...net zero energy transition)

An ecosystem of connected digital twins

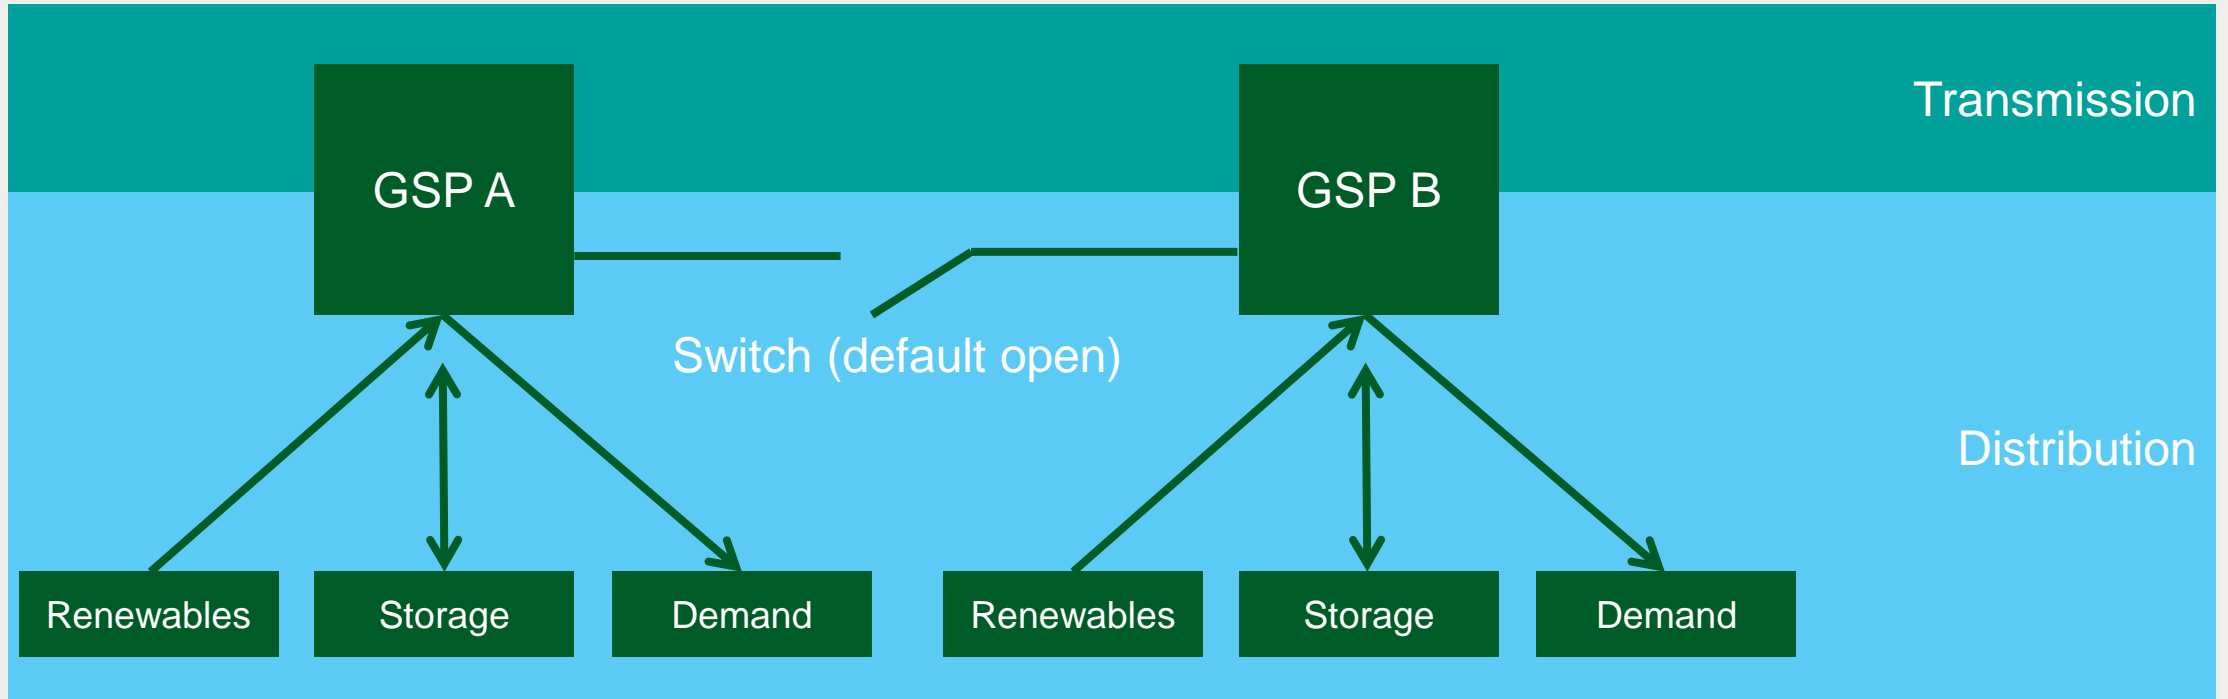

An ecosystem of connected digital twins

What needs to happen: common framework

People	Defining roles & responsibilities	Raising awareness & fostering culture	Building capabilities & skills	
Process	Aligning around industry codes & standards	Engaging stakeholders	Creating a governance framework	Determining the operating environment
Data	Aligning models & taxonomies	Establishing management & governance	Increasing visibility & enabling sharing	Managing security
Technology	Connecting physical infrastructure	Enhancing modelling and analysis	Creating an interoperable 'tech-stack'	

Demonstrator use case

Example GSP configuration (GSPs can be owned by the TO or the DNO)

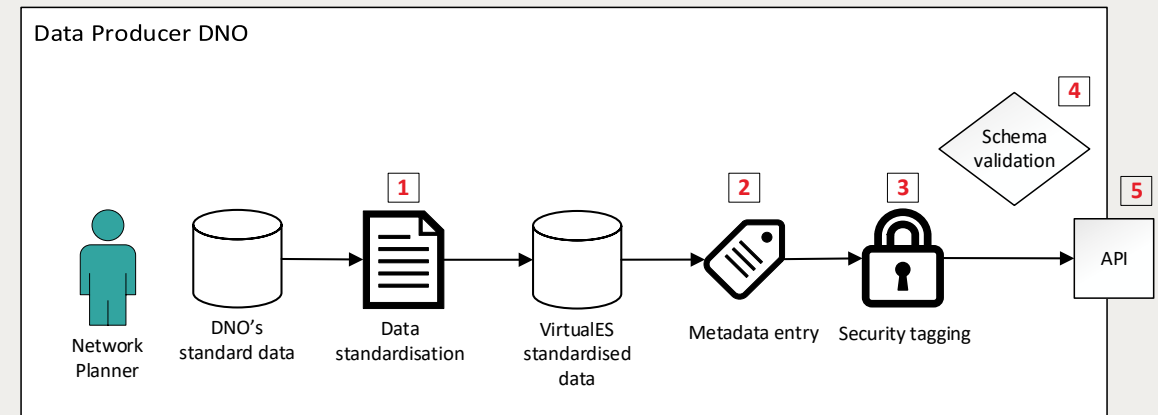

User journey

1 – Prepare & 2 – Publish

Task Lead: Data Provider

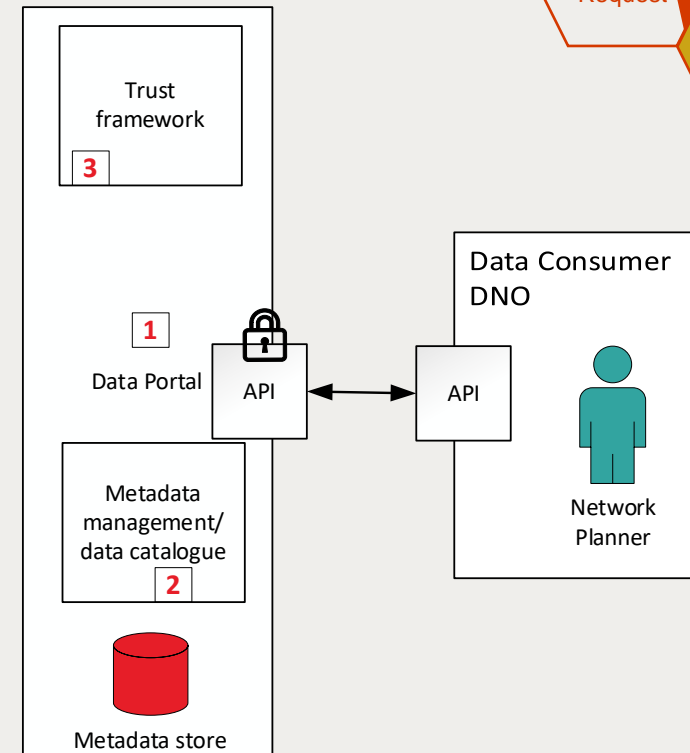

#	Activity	Importance
1	Data is standardised into agreed sector format	Enables interoperability across sector both legal and technical, considering common language & standards
2	Metadata is populated	Enables search, discovery and understanding of the data
3	Data is security tagged	Enables secure sharing of data with the correct consumers
4	Data schema is validated	Checks that the data being shared conforms to agreed standards
5	Data is published using APIs	Ensures that the data is securely shared using approved protocols

3 – Search & 4 – Request access

Task Lead: Data Consumer

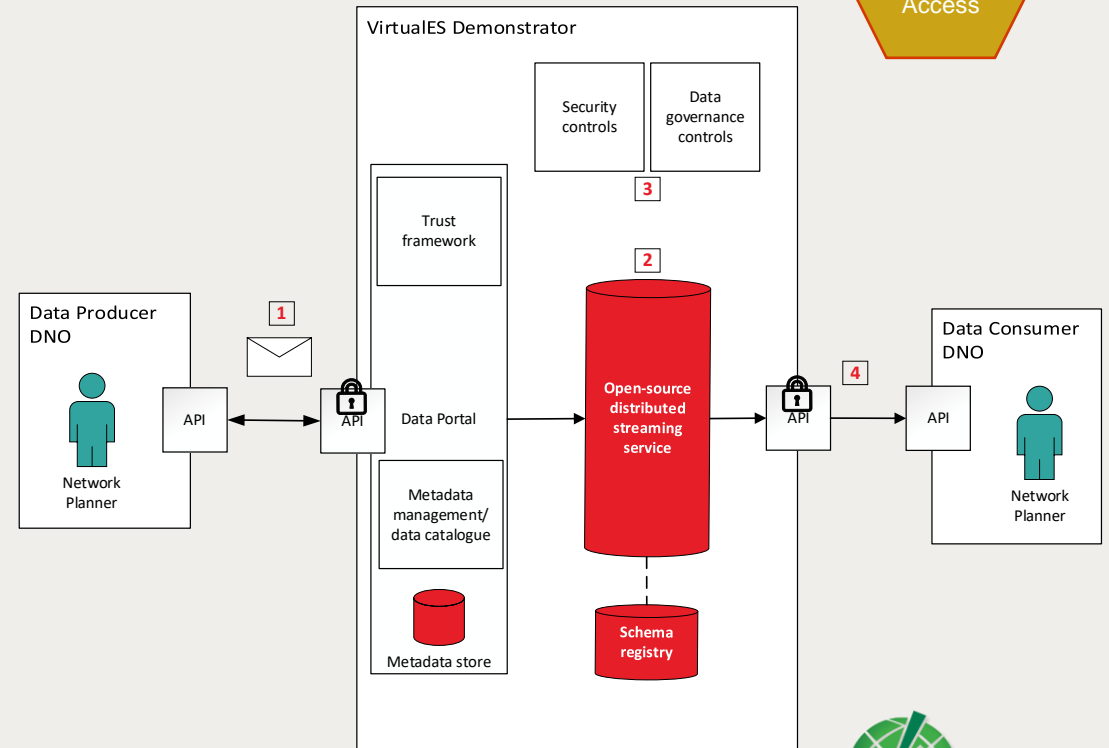

#	Activity	Importance
1	Consumer accesses data portal	Front entrance/user interface for the VirtualES that can be accessed as a web link.
2	Data is searched using a data catalogue	Search and discovery relevant data using search filters and metadata.
3	Access to data is requested using a trust framework <ul style="list-style-type: none"> 1. Consumer is pre-approved 2. Consumer not pre-approved and must request access 	Provides the mechanism to enable sharing by ensuring permission policies are met

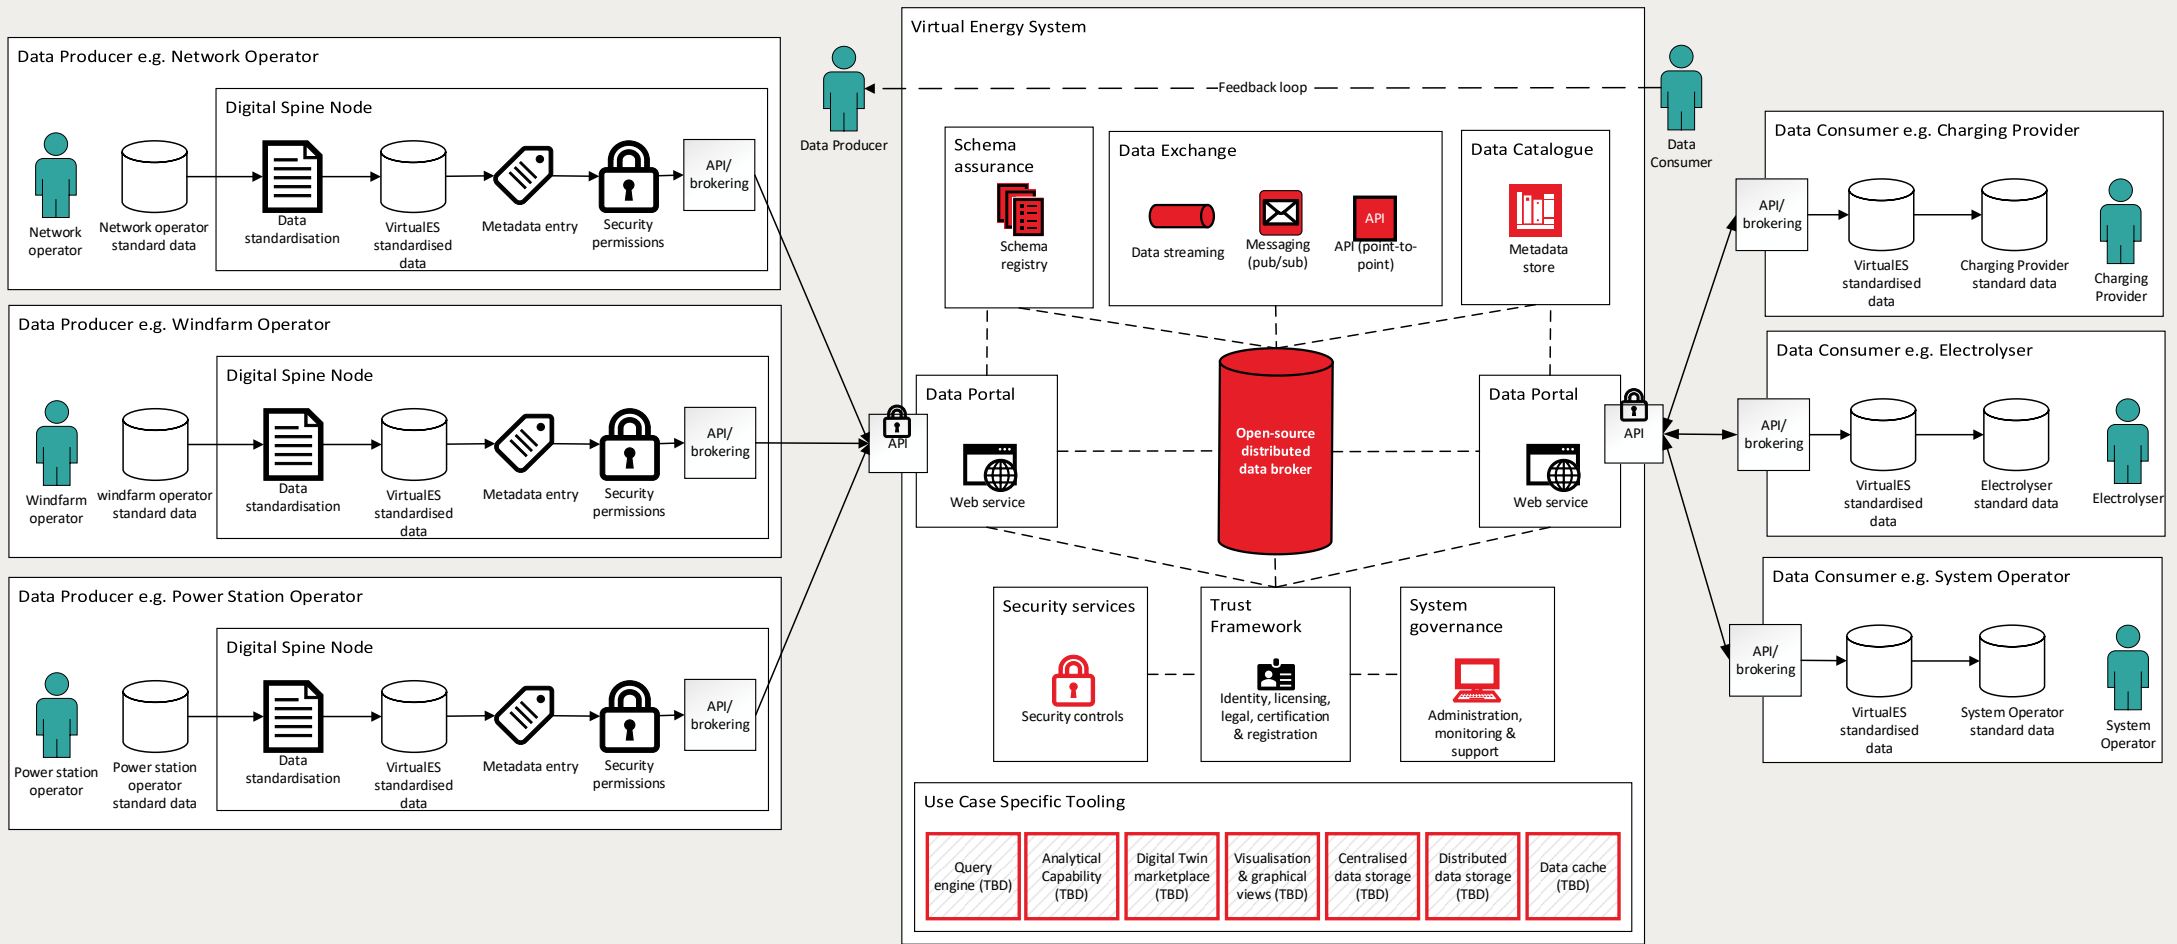

5 – Review request & 6 – Provide access

Task Lead: Data Provider

#	Activity	Importance
1	Producer is notified of access request	Producer can see who is requesting access and why
2	Data is streamed using a distributed streaming service	Data is streamed in 'right-time' using a performant streaming technology
3	Security & governance controls are applied	Security, governance and other policies are applied to the data
4	Data is accessed using APIs	Data is securely accessed using approved protocols

High level design

Role of standardisation and conformance

- Common Grid Model Exchange Standards (CGMES) 3.0 : Latest version of ENTSO-e's adoption of CIM 17 from IEC standards
- GB CIM : Ofgem adoption of CGMES 3.0 with extensions for consideration into distribution networks long term planning

[ofgem.gov.uk – Outputs from the Long Term Development Statement Reforms Working Group – July 2023]

- GC0139 : Enhanced planning data exchange to facilitate whole system planning

[nationalgrideso.com – Industry Info – Codes – Grid Code – Grid Code Modifications]

- Energy Digitalisation Taskforce recommended increasing use across electricity and a CIM-like implementation for gas networks

[es.catapult.org.uk – Energy Digitalisation Taskforce]

- Data Best Practice promotes and requires pursuit of interoperability

[ofgem.gov.uk – Decision on updates to Data Best Practice Guidance – August 2023]
