

# Improve operations with AI/ML Powered Analytics

Jack Wilkins

September 2023

Technology Stack

Improve forecasting and asset effectiveness

Exploration of time-series data

Transmission grid balancing

Using AI/ML to improve alarm management and prioritization

Closing

# Aspen Technology Disclaimer

Aspen Technology may provide information regarding possible future product developments including new products, product features, product interfaces, integration, design, architecture, etc. that may be represented as “product roadmaps or product visions”.

Any such information is for discussion purposes only and does not constitute a commitment by Aspen Technology to do or deliver anything in these product roadmaps or otherwise.

Any such commitment must be explicitly set forth in a written contract between the customer and Aspen Technology, executed by an authorized officer of each company.

# Technology Stack - Fitting Tools to Challenges

## Supervised Learning

Learn patterns in data w.r.t. known response

Regression

Classification

## Unsupervised Learning

Learn patterns in data without response

Clustering

Pattern Recognition

## Sequential Learning

Optimize by learning reward from actions

Reinforcement Learning

Evolution Strategies

## NLP & Speech Recognition

Engage in verbal and written communication

Natural Language Processing

Speech Recognition

## Cognitive Computing

Replicate human decision-making process

Knowledge Graphs

Connect Context with Data

## Core Tech

Deep Learning

Probabilistic Network

Dimension Reduction

Anomaly Detection

Local Embedding

Matrix Profile

## Tools

## Key functions

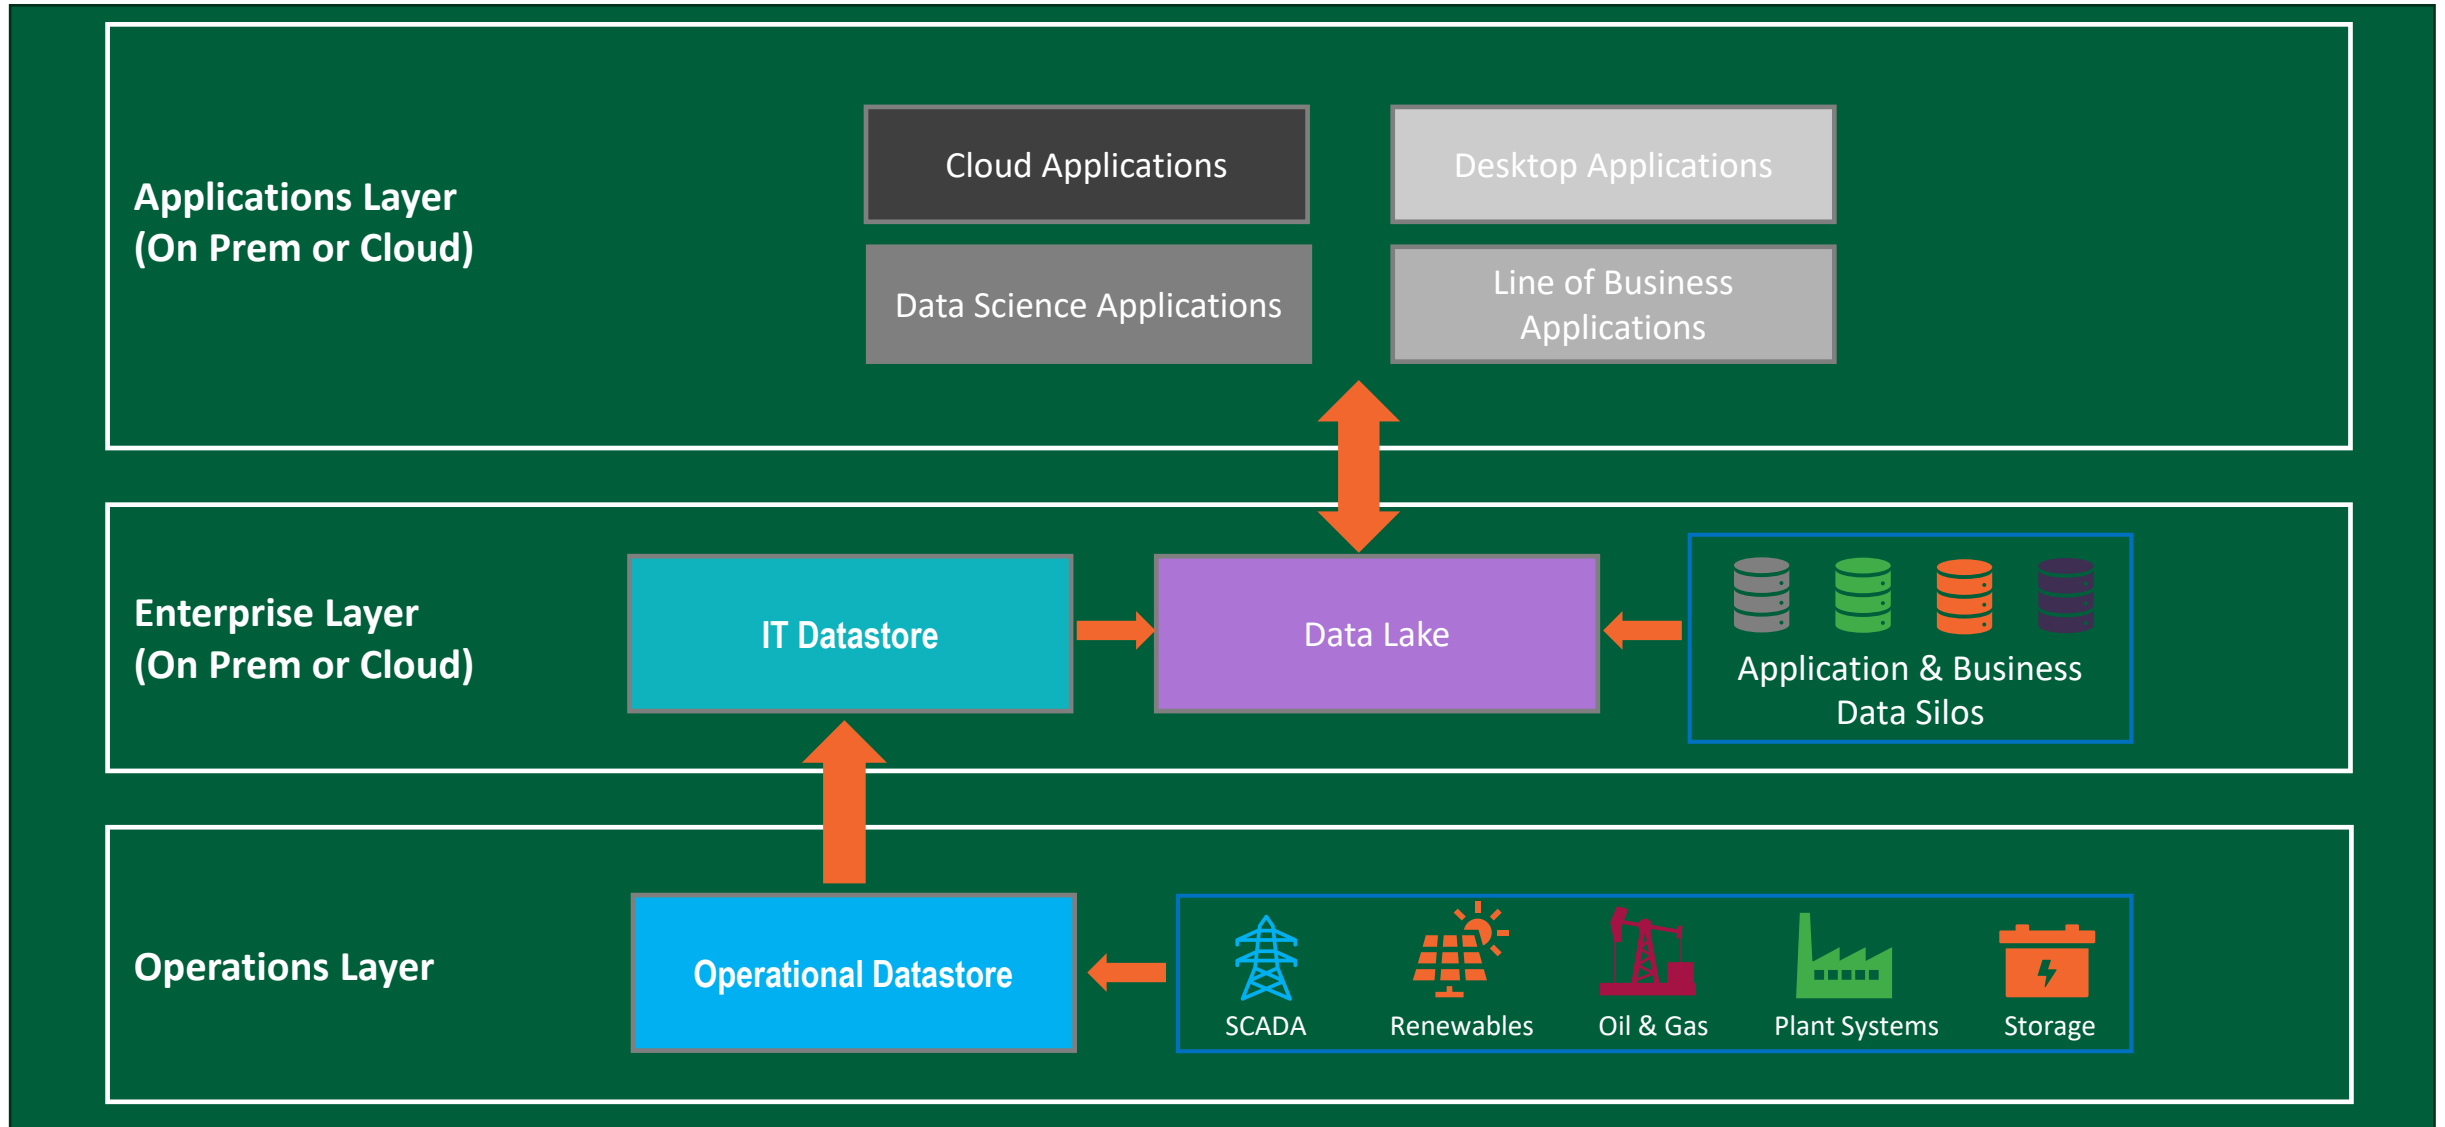

- Aggregate process data **across the enterprise** with cloud scalability
- **Visualization and Analysis** with a modern, web and mobile environment
- Vendor-neutral connectivity for **end-to-end data collaboration**
- **Contextualize operational data** across the entire enterprise
- Analyze **alarm & event data** for patterns and predictive outcomes

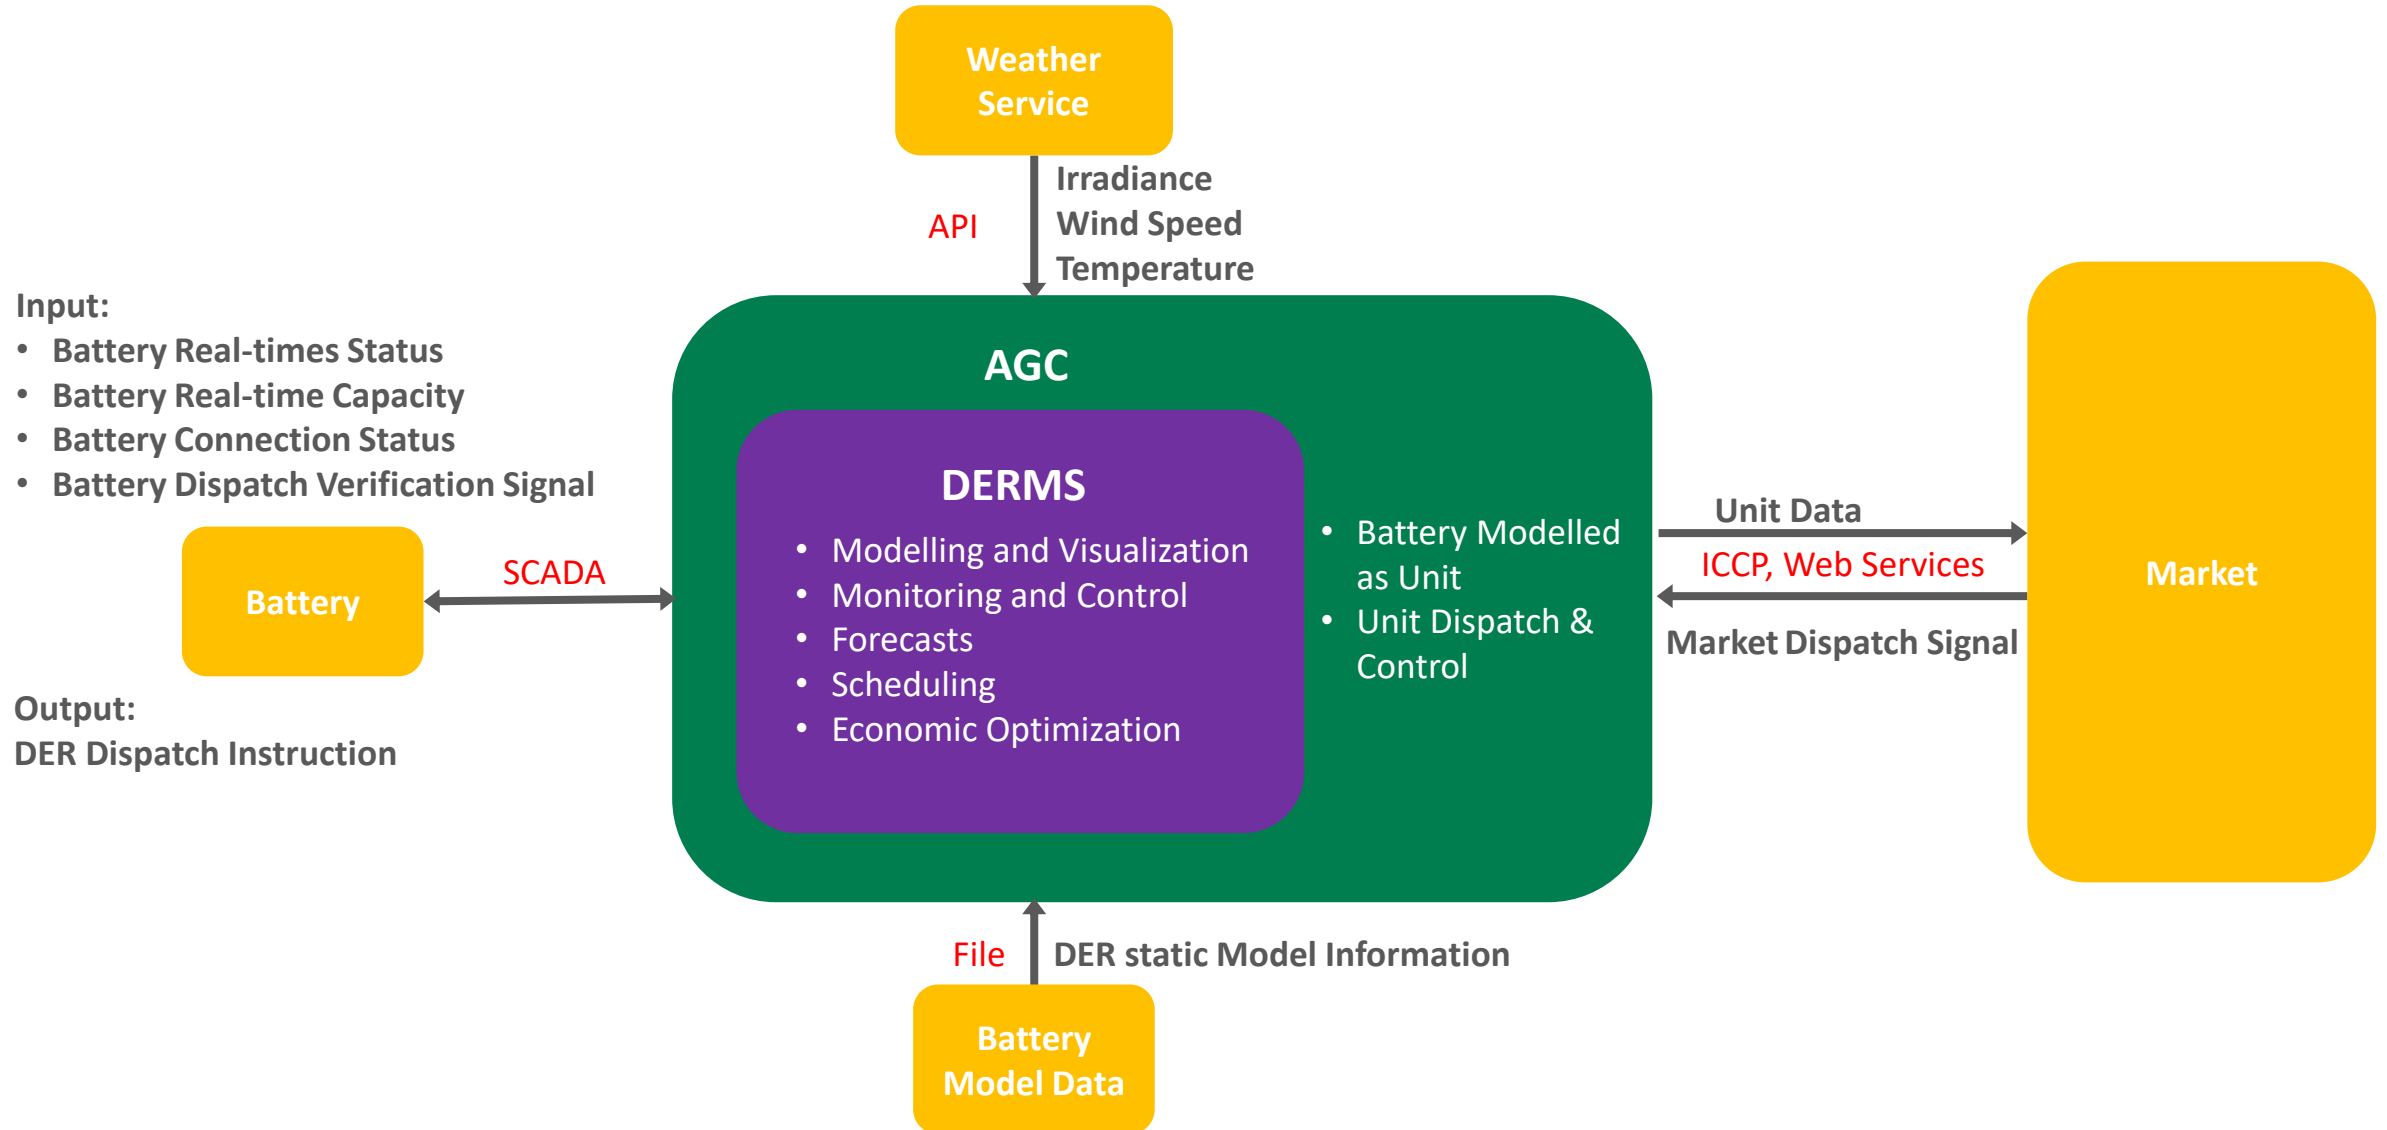

## Value drivers for utilities

- Improved process understanding
- Ability to manage data from multiple sites allowing for operational comparisons
- Flexibility of implementation with growth avenues from small to large scale cloud
- Secure data storage and retrieval
- Built in reporting and analysis improves regulatory compliance evaluations
- High availability in redundant mode

# Integrating OT & IT Data Repositories for Analytics

# DERMS Battery Management and EMS/GMS

# Forecasting of renewables and battery management

## Detailed modeling of battery resources

- Physical parameters
- Smart inverter operating modes
- Contractual limitations on use

## Real-time monitoring of battery assets

## Automatic dispatch for local control objectives

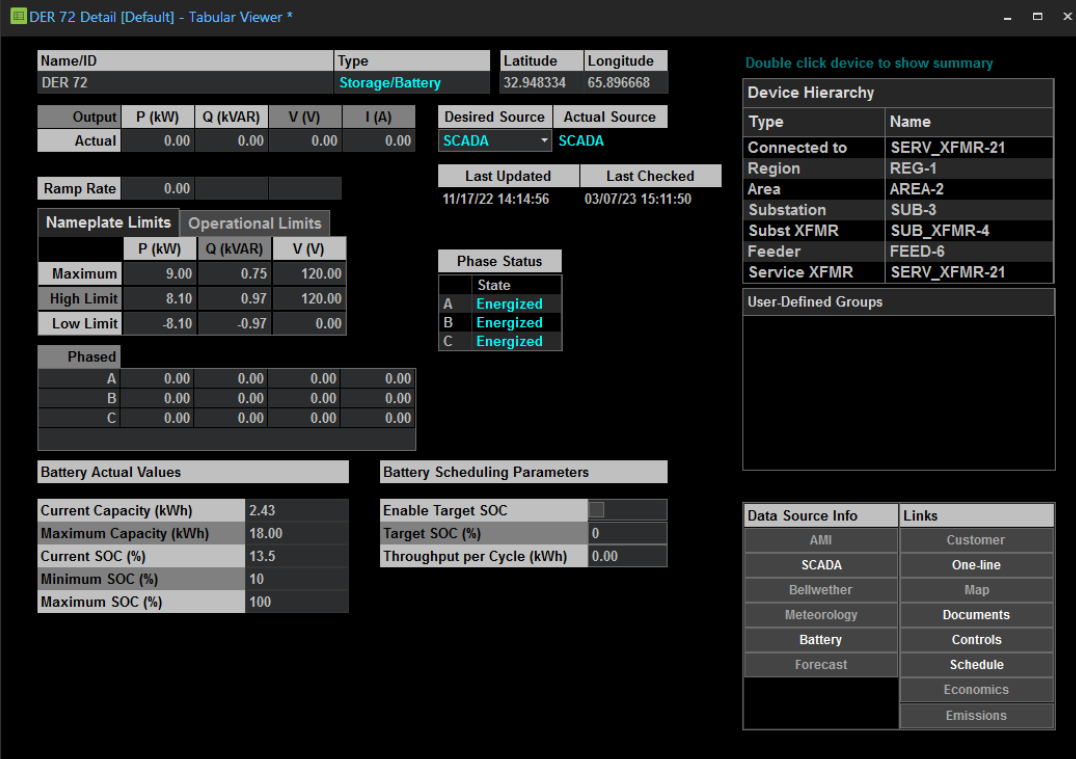

- Solar + storage management
- Point of Interconnection loading control
- Substation peak shaving/backfeed avoidance

## Optimal scheduling of real-power for local objectives

- Manual scheduling for enabling operating modes

## Integration with GMS for remote dispatch

## Market integration through GMS

DER 72 Detail [Default] - Tabular Viewer \*

Name/ID	Type	Latitude	Longitude
DER 72	Storage/Battery	32.948334	65.896668

Output	P (kW)	Q (kVAR)	V (V)	I (A)	Desired Source	Actual Source
Actual	0.00	0.00	0.00	0.00	SCADA	SCADA

Ramp Rate	Last Updated	Last Checked
0.00	11/17/22 14:14:56	03/07/23 15:11:50

Nameplate Limits	Operational Limits		
	P (kW)	Q (kVAR)	V (V)
Maximum	9.00	0.75	120.00
High Limit	8.10	0.97	120.00
Low Limit	-8.10	-0.97	0.00

Phase	State
A	Energized
B	Energized
C	Energized

Phased	A	B	C

# Maintain DERs using Predictive Analytics

Challenge: Reduce cost and effort to maintain campus solar farm.

Solution: Use cloud-based predictive analytics to forecast inverter fuse failures and panel degradation.

- Process begins with storing raw data from SCADA system in a cloud based operational datastore.
- Review and cleanse data.
- Build and train model.
- Apply model to real-world data.

## Autonomous Asset Agents

Avoid unplanned downtime by identifying the earliest possible indicators of potential asset damage and failures using machine learning

- Monitor assets in the context of their usage to provide the earliest possible warning of asset damage and failure
- Enables Engineers to **rapidly build autonomous agents** that protect assets
- Provides **precise prescriptive guidance** for mitigating alerts
- **Self-learning, adapting** over time
- Compliments existing workflows and helps **optimize business processes**

Sensors “on and around equipment” ensure agents alert root cause of issues

# Agents Do Things That Others Cannot and Do Not

## See things earlier

Months vs. days (more time for investigation and planning)

Analytics to predict when maintenance is unavoidable

## See things they cannot

To prevent process-induced damage

Analytics to prevent operations activities from causing equipment damage – “do no harm”

## Attach failure to root cause

In EAM system for both O&M guidance

Prescriptive: integrates digital work-scope from work order systems. You know what’s wrong and how to fix it

AGENTS KNOW HOW TO STOP  
EQUIPMENT FAILING

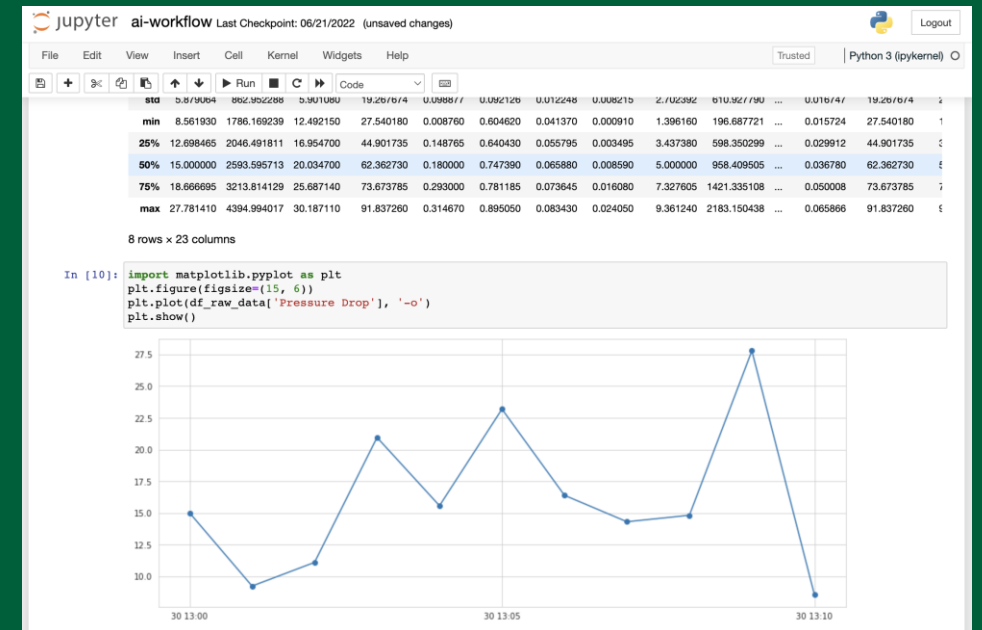

- Decrease Customer outages by improving Equipment Availability and Reliability
- Reduce Operating Expenses by eliminating over maintenance and excess spare parts
- Reduce Safety and Environmental Incidents by transforming Emergency work into Planned work

## Opportunity

- Allow custom data pre-processing
- Support more advanced exploratory data analysis
- Enable growing data scientist persona at our customers

## Business Value

- Additional flexibility: Support custom use cases
- Better user experience with less context switching

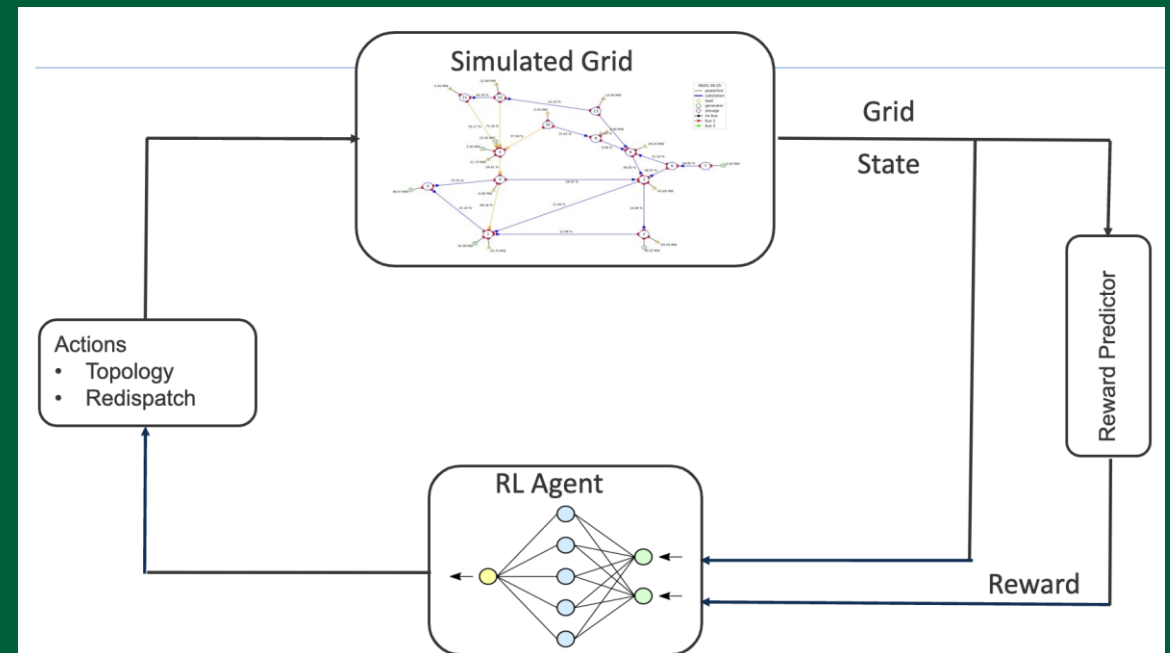

## Opportunity

- Autonomous balancing of power transmission grid
- Alleviating congestion in network by topologic switching
- Assist grid operator by proposing action

## Business Value

- Combine topologic switching with traditional measures
- Improve the grid resilience and reduce costly measures
- Identify under-utilized, cost-effective flexibility in the network

VISION

# Distribution grid balancing using quantum computing

## Opportunity

- Build awareness to validate opportunities and readiness
- Explore new use cases based on combinatorial problems
- Identify strong technology partners

## Business Value

- Exponential acceleration of compute possible
- New applications based on combinatorial problems

## Exponential Acceleration

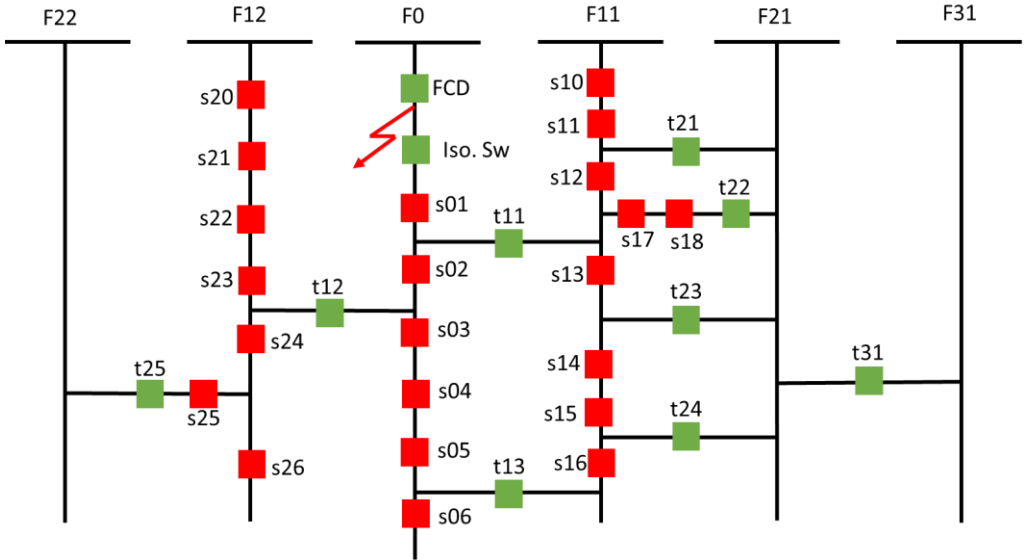

Classical  $O(n)$

Quantum  $O(2^n)$

	Life sciences	Financial services	Travel, transport, and logistics	Global energy and minerals	Telecommunications, media, and technology	Advanced industries	Insurance
Simulation	Dark Blue	Medium Blue	Medium Blue	Medium Blue	Medium Blue	Medium Blue	Medium Blue
Linear algebra for AI/machine learning	Dark Blue	Dark Blue	Dark Blue	Dark Blue	Light Blue	Light Blue	Dark Blue
Optimization and search	Dark Blue	Dark Blue	Dark Blue	Dark Blue (highlighted with red border)	Dark Blue	Dark Blue	Medium Blue
Factorization	Light Blue	Dark Blue	Light Blue	Light Blue	Dark Blue	Light Blue	Light Blue

## Power flow simulator

Compute the states of each node ( $10^6$ )

< 100 Binary variables  
Switching capacitors (on/off)

Objective function value  
Soft constraints penalty value

Target: find the best combination of active capacitors

# Predictive transformer monitoring at the edge

## Opportunity

- Include asset health monitoring in operational insights
- Enable distributed transformer monitoring close to the device
- Consider transformer health in decisions e.g., switching

## Business Value

- Enhanced operational insights with predictive maintenance
- Lower costs when using available, distributed compute
- Increased grid robustness by considering asset health

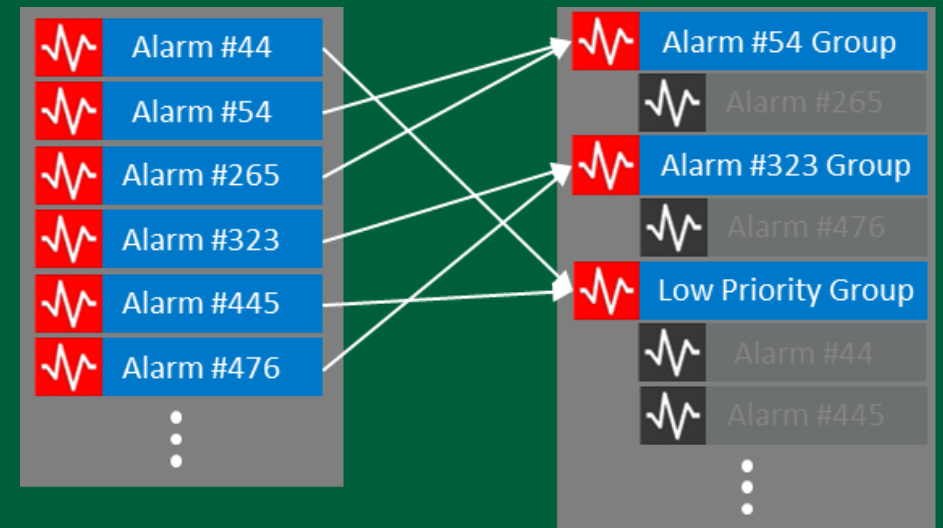

# Alarm Analytics and Prioritization

## Opportunity

- Reduce response time by prioritizing and grouping alarms
- Identify alarm patterns and correlations for root cause analysis
- Automatically recommend possible corrective actions

## Business Value

- Enhance operational efficiency by focusing on the most critical issues first
- Improve decision-making by clarifying the alarm root causes
- Save cost by identifying and addressing high priority alarms swiftly

## Leverage the variety of tools

- Open Source
- Vendor specific applications

## Proven data repository

- Highly scalable
- High performance

## Explore your data

- Opens new methods to transform data
- Cloud based services provide elastic compute resources

## Think outside the box

- Revisit legacy challenges
- Deliver increased business value

Thank You
