

I am writing to express my strong interest in serving as Vice-Chair of CIGRE NGN. With a solid background in technical advisory roles across the energy sector, I have contributed to a diverse range of projects, including interconnectors and Battery Energy Storage Systems. These experiences have equipped me with a comprehensive understanding of the technical, regulatory, and commercial aspects of modern power systems.

Beyond my project work, I lead our organisation's Energy Unit Early Career Professionals network, representing and engaging a community of approximately 500 colleagues across the UK and Europe. In this role, I have successfully delivered knowledge-sharing initiatives, networking events, and professional development programs, which have strengthened my organisational, leadership, and stakeholder management capabilities. I am also active in industry thought leadership, having contributed to two conference proceedings this year on topics such as offshore energy hubs and electricity markets.

I am an engaged NGN member and actively participate in CIGRE activities. I have joined a working group as an NGN member and currently serve as its secretary. This experience has given me strong familiarity with CIGRE's objectives and collaborative approach, while providing insight into fostering technical exchange across international teams.

As Vice-Chair, I will bring strong organisational skills and experience in leading large professional networks. I am active in other young professional communities within the energy sector, which positions me well to build connections and share best practices. My vision is to expand NGN's reach—particularly within industry—by engaging companies and professionals alongside academia. I aim to foster collaboration and enhance NGN's visibility by delivering high-impact panels, technical discussions, and knowledge-sharing events throughout the year in partnership with industry stakeholders.

As a proactive engineer, I am highly motivated by the opportunity to contribute to support the NGN Committee in advancing its mission.
